You can find the version number of your book on the copyright page.

### Corrections to Version 1.0.0 included in Version 1.0.1

Note that some of the updates for Version 1.0.1 here were released into production as an interim version 1.0.0a

#### Change of ISBN Number

A problem with Amazon's catalog effectively "swallowed" the ISBN we had originally registered for the print edition of the book. We had no choice but to register a second ISBN number from the Asatte Press ISBN block to suit Amazon's preferences.

- **Original ISBN Number:** 978-1-937468-09-5
- **Updated ISBN Number:** 978-1-937468-98-9

#### Page 18 – Incorrect Reference Association Arrow

The relationship between "Doorbell System" and "Chime Unit" was incorrectly shown as a reference association (no diamond) rather than a composition (solid black diamond) in Figures 2-22 and 2-23. (This issue was corrected in version 1.0.0a)

#### Page 39 – Shared Vision for the System

"Single Version of the Truth" has been changed to "Shared Vision for the System". This change represents the evolving understanding of the MBSE community about the role of the system model. Originally, the ambition was for the model to be the "Single Version of the Truth". However, the community understanding of the problem has evolved to recognize that the "Authoritative Source of the Truth" (ASoT) will be a configuration-managed collection of data spanning several systems. "Shared Vision of for the System" more accurately represents the role of the SysML model.

#### Page 95 – Garbled sentence clarified:

- **Old:** "However, some teams prefer to define ports on the block definition diagram the defines the context of the system as part of the early identification of interfaces to the system."
- **New:** "However, as part of the early identification of interfaces to the system, some teams prefer to define ports on the block definition diagram that the defines the context of the system."

#### Page 151 – Typo corrected

"Image File" corrected to "Image Data" under figure 7-23 to bring the text into line with the example model.

#### Page 155 – Remove extra word in footnote

"have create" corrected to "create".

#### Page 197 – Type corrected

"one people" corrected to "one person"

**Page 216 – Description of (do) behavior**

Description clarified slightly.

**Page 233 – Type corrected**

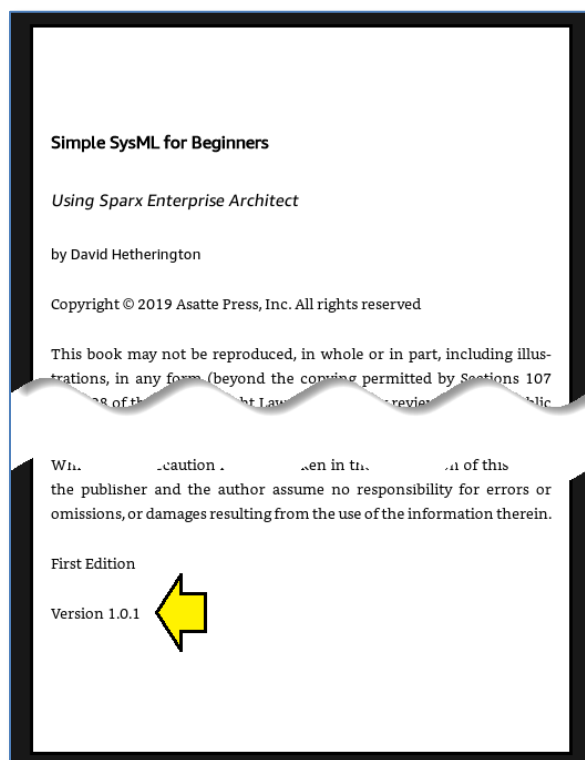

“all though” corrected to “although”

**Page 247 – Type corrected**

“make add” corrected to “add”

## Getting Kindle Book Updates

Asatte Press generally tries to synchronize such maintenance updates so that updated print editions start shipping at the same time the updated Kindle edition becomes available. For both the print edition and the Kindle edition, the current version can be confirmed on the copyright page.

Amazon’s policy on updating existing customers to new versions of previously purchased books is a little confused. The official policy is available here:

## Downloading Corrected Example Files

The example files for the book have been updated to Version 1.0.1 and contain all of the fixes mentioned in this document. Existing book owners can download the corrected example files following the (unchanged) instructions in previous versions of the book.
